

Mint & Chill

ETHGlobal Lisbon 2026

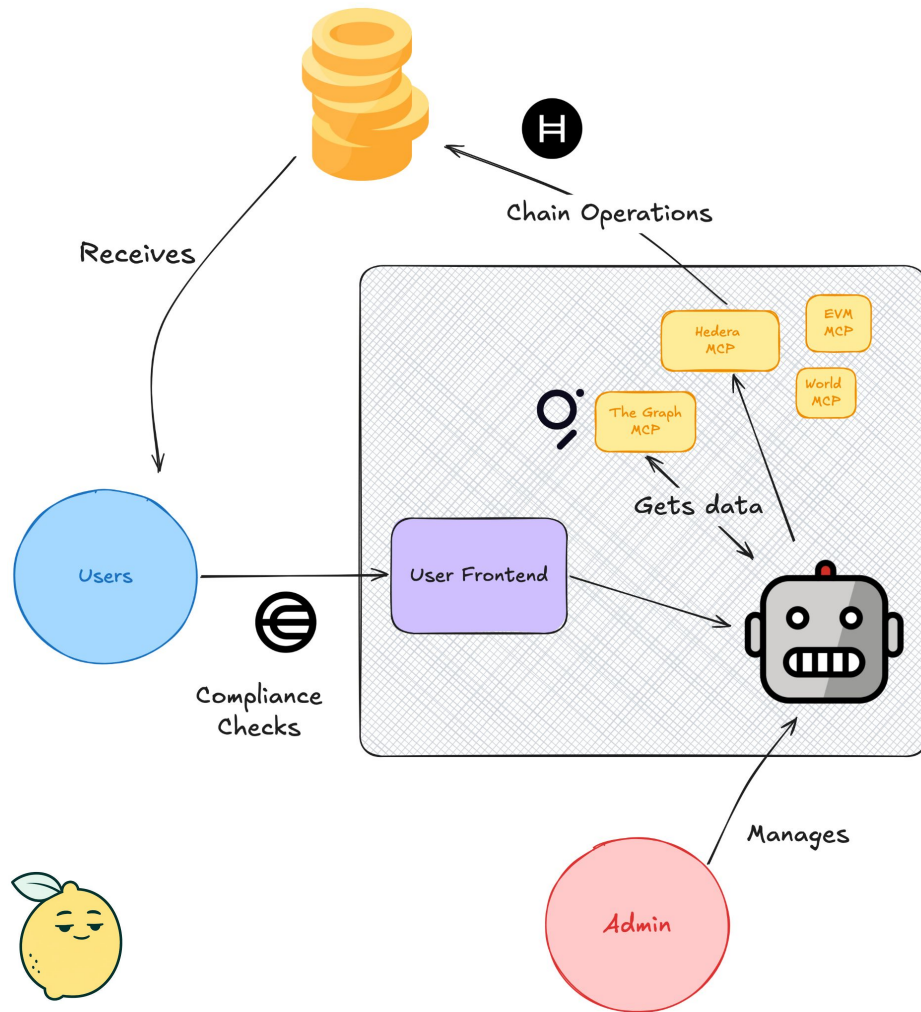

Agent-operated marketplace for
RWA token minting, compliance and
lifecycle management

The Problems

- Blockchains are **hard**
 - Lots of technical friction.
 - Difficult learning curve for common users.
 - Mainstream AI can't solve specific blockchain data questions
- Token **compliance is difficult**
 - Whitelisting, different credentials, data leaks...
- Token **Lifecycle management is tricky:**
 - Owner of an EOA loses the key? Disappears? Passes away? - Assets lost forever - This doesn't happen to real world assets.
 - Users can lose interest and you end up with broken DAO governance, lost yield, etc...

Our Solution

- 1 minute deployment Repo -> Railgun
- Hermes agent packed with MCPs and frontend to interact with users
- Tokens deployable in Hedera or Sepolia
- Compliance checks with World: Country, age, selfie (low friction PoL)
- End to end token lifecycle management: Deployment, Customizable parameters, compliance, clawback...
- Gated chat for token holders enriched with quality data.
